Education

Krupajan Engineering College

Bachelor of Technology in Electrical Engineering

Bhubaneswar, Odisha

Aug. 2012 – May 2016

Experience

Flockjay Inc

Senior Backend Developer

Remote

Jan 2021 – Present

- Sole backend engineer through the company's pivot from a sales bootcamp to a B2B SaaS platform; now senior on a 7-person team with 15+ enterprise clients including Redis
- Brought average response times and query counts down ~70% through targeted query optimization, shipped incrementally alongside normal feature work
- Built a rule engine that runs customer-defined conditions on a schedule — converts them to Django ORM queries at runtime to trigger enrollment and access changes
- Set up SSO and SCIM provisioning with Okta and Microsoft Entra; the SCIM layer handles cross-org identity, letting the same user exist across multiple client orgs with different roles in each
- Built a Salesforce-backed checkpoint system for learning paths — on completion it queries Salesforce, checks activity against author-set conditions, and only then unlocks the next step
- Built the content system from scratch (courses, learning paths, assets, collections) and integrated Salesforce, Clari, and Gong to bring real-world sales and call data into the platform for authors
- Added full-text search across all content types using PostgreSQL's built-in FTS — first search feature on the platform

Radicali

Software Engineer

Bengaluru, KA

Feb. 2020 – Jan. 2021

- Replaced the existing search framework with Elasticsearch, cutting search response times by over 50%
- Wrote and optimized backend tests, bringing code coverage up by 30%+
- Built a data pipeline with Scrapy, SQS, and S3 to crawl 50,000+ links daily, validate and clean the data into a reliably updated dataset

Masai School

Technical Mentor

Bengaluru, KA

Jun. 2019 – Dec. 2019

- Mentored students across frontend fundamentals and practical projects over an 8-month coding bootcamp

Manch

Python Developer

Bengaluru, KA

Mar. 2018 – Apr. 2019

- Built and maintained a Scrapy/Selenium crawler that translated and saved 10,000+ pages per day into MongoDB

iQuanti

Product Support Engineer

Bengaluru, KA

Jan. 2017 – Feb. 2018

- Built a Django app that fetched keyword rankings from a third-party API and saved results to S3 and Snowflake, cutting ad-hoc report turnaround time by over 50%

Technical Skills

Languages: Python, JavaScript, TypeScript

Frameworks: React, Django, Django REST Framework

Tools: Git, AWS, PostgreSQL, Elasticsearch, Celery, SQS, Snowflake, Scrapy
