SUMMARY

Senior Backend Engineer with 7+ years building scalable Python/Django systems. Expert in REST APIs, SSO/SAML/SCIM, performance optimization, and full-text search. Experienced leading backend architecture through company pivots, serving 15+ enterprise clients. Strong focus on PostgreSQL query tuning, async programming, and data pipeline design.

EXPERIENCE

Senior Backend Developer

Jan 2021 – Present

Flockjay Inc

Covina, CA (Remote)

- Sole backend engineer through the company's pivot from a sales bootcamp to a B2B SaaS platform; now senior on a 7-person team with 15+ enterprise clients including Redis
- Brought average response times and query counts down 70% through N+1 elimination, `select_related/prefetch_related` optimizations, and strategic database indexing; shipped incrementally alongside feature work
- Built a rule engine that runs customer-defined conditions on a schedule — converts them to Django ORM queries at runtime to trigger enrollment and access changes
- Set up SSO and SCIM provisioning with Okta and Microsoft Entra, enabling enterprise clients to onboard 100s of users via automated provisioning; SCIM layer handles cross-org identity, letting the same user exist across multiple client orgs with different roles in each
- Built a Salesforce-backed checkpoint system for learning paths — on completion it queries Salesforce, checks activity against author-set conditions, and only then unlocks the next step
- Built the content system from scratch (courses, learning paths, assets, collections) with full CRUD, versioning, and access control
- Integrated Salesforce, Clari, and Gong to bring real-world sales and call data into the platform for content authors, syncing opportunities, activities, and call recordings on a scheduled basis
- Added full-text search across all content types using PostgreSQL's built-in FTS — first search feature on the platform

Software Engineer

Feb 2020 – Jan 2021

Radicali

Bengaluru, KA

- Replaced the existing search framework with Elasticsearch, cutting search response times by over 50%
- Wrote and optimized backend tests with pytest, bringing code coverage from 40% to 70%+
- Built a data pipeline with Scrapy, SQS, and S3 to crawl 50,000+ links daily, validate and clean the data into a reliably updated dataset

Python Developer

Mar 2018 – Apr 2019

Manch

Bengaluru, KA

- Built and maintained a Scrapy/Selenium crawler that translated and saved 10,000+ pages per day into MongoDB

Product Support Engineer

Jan 2017 – Feb 2018

iQuanti

Bengaluru, KA

- Built a Django app that fetched keyword rankings from a third-party API and saved results to S3 and Snowflake, cutting ad-hoc report turnaround time by over 50%

SKILLS

Languages: Python, JavaScript, TypeScript, SQL

Frameworks: Django, Django REST Framework, FastAPI, Celery, Scrapy

Databases: PostgreSQL, Elasticsearch, MongoDB, Snowflake

Infrastructure: AWS (S3, SQS, EC2), Docker, Redis, Git, GitHub Actions

Concepts: REST APIs, SSO/SAML/SCIM, Full-Text Search, Data Pipelines, Async Programming

EDUCATION

Krupajal Engineering College

Bhubaneswar, Odisha

Bachelor of Technology, Electrical Engineering

May 2012 – Aug 2016

- Scored 6.9 CGPA
- Awarded a scholarship for academic excellence in the second year of the program
